

DL SHEAR TENSION PACKER, RIGHT-HAND MANUAL

16" X 4-1/2"

Manual No:
DL-412-16000-1098

Revision: **D**

Revision Date:
10/30/2023

Authored by: *J.Anderson*

Approved by: *T.Myerley*

A) DESCRIPTION

The DL Tension Packer is an economical, compact tool for injection, pumping, medium range treating and production applications. The packer is set by 1/4 right-hand rotation of the tubing and then pull tension. To release, slack off the tubing and rotate 1/4 turn to the left into the release position.

The DL Shear Tension Packer features an adjustable straight pull safety shear release. This packer is not designed to be run in compression.

NOTE: If a higher shear release is needed, the brass shear pins can be replaced with optional mild steel shear pins that shear at 6,000 lbs per pin. Contact D&L Oil Tools for recommendation on maximum shear value allowed for tool.

B) SPECIFICATION GUIDE

CASING			TOOL OD (INCHES)	TOOL ID (INCHES)	THREAD CONNECTION BOX UP / PIN DOWN	PART NUMBER
SIZE (INCHES)	WEIGHT (LBS/FT)	RECOMMENDED HOLE SIZE (INCHES)				
16	65.0 – 109.0	14.688 – 15.250	14.688	4.00	4-1/2 EUE	41216RM 41216RMH ¹ 41216RMV ² 41216RMC ³ 41216RMHC ⁴ 41216RMVC ⁵

Tool Options: ¹HSN, ²Viton, ³Nitrile, Carbide, ⁴HSN, Carbide, ⁵Viton, Carbide

DIFFERENTIAL PRESSURE (MAX)	TENSILE LOAD THRU TOOL (MAX)
3,000 PSI	198,500 LBS

C) PRE-INSTALLATION INSPECTION PROCEDURES

CAUTION: D&L ships tool connections made-up **HAND TIGHT**—labeled with hand-tight tape on the tool (Fig. 1)—unless stated otherwise. Tighten/torque all connections properly before operating tool.

Fig. 1

GENERAL THREAD CONNECTION TORQUE RECOMMENDATIONS			
STUB ACME / ACME THREADS	INTERNAL TAPERED TUBING THREADS		PREMIUM THREADS
	UP TO 2-3/8"	GREATER THAN 2-3/8"

C) PRE-INSTALLATION INSPECTION PROCEDURES (cont'd)

GENERAL SCREW TORQUE RECOMMENDATIONS									
SCREW SIZE (INCHES)	#6	#8	#10	1/4	5/16	3/8	7/16	1/2	5/8 and larger
TORQUE RANGE (INCH-POUNDS)	5 – 8	10 – 15	18 – 25	25 – 40	50 – 80	90 – 135	160 – 210	250 – 330	450 - 650

Before first use, D&L recommends disassembly and inspection of the tool unless stated otherwise. Ensure parts have not been damaged during shipping. Replace damaged parts with D&L replacement parts. Contact D&L sales for replacement part information.

Re-assemble the tool after inspection. Install parts in the correct order and orientation. Properly tighten connections.

Before re-using the tool, D&L recommends disassembly and inspection of the tool. Clean parts and ensure parts are in good working condition. Replace worn or damaged parts with D&L replacement parts.

When redressing the tool, D&L recommends replacement of all seals, elements, o-rings, shear screws, etc. Contact D&L sales for redress kit and/or other replacement part information.

D) SETTING PROCEDURES

Before running the packer, check the safety shear release to see that the proper quantities of shear pins are installed. Each pin shears at 4,000 lbs.

NOTE₁: If a higher shear release is needed, the brass shear pins can be replaced with optional mild steel shear pins that shear at 6,000 lbs per pin. Contact D&L Oil Tools for recommendation on maximum shear value allowed for tool.

Run to setting depth. Set down the tubing and rotate 1/4 turn to the right at the packer. Pull tension on the packer to set the slips and compress the packing elements. A minimum pull of 32,000 lbs at the packer is required to pack off the elements.

NOTE₂: Take care not to pull more than two-thirds (2/3) of the safety shear setting.

E) RELEASING PROCEDURES

Set down the tubing to unset the slips, relax the packing elements. Rotate 1/4 turn to the left at the packer to re-jay the packer. The tool may now be moved and reset, or pulled from the well.

If this does not un-set the packer, pull to shear the safety shear release. Once it shears, the tool must be tripped out. If the safety shear release will not shear, torque the tubing to the right until the secondary release threads break loose. Rotate twelve to fifteen (12 - 15) additional turns to the right at the tool to release the tubing from the packer.

F) ELASTOMER TRIM TEMPERATURE GUIDE

RUBBER TYPE	TEMPERATURE RANGE (F°)
NITRILE	40° - 250°F
HSN (HNBR)	70° - 300°F
VITON	100° - 350°F

G) RECOMMENDED HAND TOOLS

- VISE
- GLOVES
- ALLEN WRENCHES
- TAPE MEASURE
- O-RING PICK
- BAR
 - 1/2-INCH
 - 3/4-INCH
- PAINT BRUSH, 2-INCH
- PIPE WRENCH, 3-FT (2 EA)
- "CHEATER" PIPE, 4-FT LONG
- ADJUSTABLE WRENCH, 12-INCH
- CORDLESS DRILL, 18V
- SNAP RING SPREADER PLIERS
- ALIGNING PUNCH
- BOLTS, 1/4-20 X 1-1/4" LONG (4EA)
- SCREWDRIVER SET, FLAT-TIPPED
- SOCKET SETS
 - 3/8-INCH DRIVE
 - 1/2-INCH DRIVE
- HAMMERS
 - SLEDGE
 - BALL PEEN
 - DEAD BLOW

H) DISASSEMBLY

NOTE₃: Ensure vise is capable of handling weight of tool.

NOTE₄: Support tool during disassembly and assembly with jack stands as necessary.

H-1) Clamp top sub (6) in vise.

H-1.1) Unscrew and remove pipe plug (16) from shear sleeve (8).

H-1.2) Remove shear pins (5) from hole in shear sleeve (8). Rotate shear sleeve (8) as needed.

H-1.3) Unscrew and remove bottom sub (4) from mandrel (1).

H-1.3.1) Remove o-ring (19) from bottom sub (4).

H-1.4) Unscrew shear sleeve (8) from rubber mandrel (14) and remove from mandrel (1).

H-1.5) Remove flange (21) from shear sleeve (8).

H-1.6) Remove rubber mandrel assembly from mandrel (1) and disassemble:

H-1.6.1) Remove element (3) and cone (2) from rubber mandrel (14).

H-1.6.2) Remove o-ring (20) from rubber mandrel (14).

H-1.7) Unscrew and remove button head cap screws (17) from J-body (7) and spring ring (13); remove drag springs (10).

H-1.8) Unscrew and remove button head cap screws (18) from cage ring (9).

H-1.9) Unscrew and remove 5/8" cap screw (refer to tech illustration) from mandrel (1).

H-1.10) Remove J-body assembly from mandrel (1) and disassemble:

H-1.10.1) Wedge slips (12) outward (if needed). Unscrew and remove J-body (7) from slip body (15).

H-1.10.2) Remove wedges (if needed). Remove slips (12) and slip springs (11) from slip body (15).

H-1.10.3) Remove spring ring (13) from J-body (7).

H-1.11) Unscrew and remove mandrel (1) from top sub (6) (**NOTE₆:** Left-hand threads).

CAUTION₃: Do NOT wrench or clamp on seal surfaces.

H-1.12) Remove cage ring (9) from mandrel (1).

H-2) Unclamp and remove top sub (6) from vise.

I) ASSEMBLY

NOTE₅: Clean and inspect all parts. Replace all worn and damaged parts. Install parts in proper order and orientation.

NOTE₃: Ensure vise is capable of handling weight of tool.

NOTE₄: Support tool during disassembly and assembly with jack stands as necessary.

I-1) Clamp top sub (6) in vise.

I-1.1) If 5/8" cap screw (refer to tech illustration) is already installed, unscrew and remove from mandrel (1). Set aside for installation later.

DL SHEAR TENSION PACKER, RIGHT-HAND MANUAL 16" X 4-1/2"

I) ASSEMBLY (cont'd)

- I-1.2) From upper end of mandrel (1), install cage ring (9) onto mandrel (1).
- I-1.3) Screw mandrel (1) into top sub (6) (**NOTE6:** Left-hand threads).
CAUTION3: Do NOT wrench or clamp on seal surfaces.
- I-1.4) Assemble J-body assembly and install:
 - I-1.4.1) Install slips (12) and slip springs (11) into slip body (15). Wedge slips outward.
NOTE7: Uses three (3 ea) slip springs (11) per slip (12).
 - I-1.4.2) Screw slip body (15) onto J-body (7). Remove wedges.
 - I-1.4.3) Install spring ring (13) onto J-body (7).
 - I-1.4.4) Install J-body assembly onto mandrel (1). Rotate J-body assembly to access 5/8" threaded hole in mandrel (1). Screw 5/8" cap screw into mandrel (1).
 - I-1.4.5) Move "J-pin" of mandrel (1) into lower landing of J-slot.
- I-1.5) Align holes in J-body (7) with threaded holes in cage ring (9). Screw button head cap screws (18) into cage ring (9).
- I-1.6) Set drag springs (10) in place on J-body (7). Align holes in drag springs with threaded holes in J-body (7) and spring ring (13). Screw button head cap screws (17) into J-body (7) and spring ring (13).
NOTE8: Uses three (3ea) drag springs (10) per drag spring location (8 total).
- I-1.7) Assemble rubber mandrel assembly and install:
 - I-1.7.1) Install o-ring (20) into groove in rubber mandrel (14).
 - I-1.7.2) Install cone (2) and element (3) onto rubber mandrel (19).
 - I-1.7.3) Install rubber mandrel assembly onto mandrel (1).
CAUTION2: Do NOT rip or tear o-ring while installing.
- I-1.8) Install flange (21) onto shear sleeve (8).
- I-1.9) Install shear sleeve (8) onto mandrel (1) and screw into rubber mandrel (14).
- I-1.10) Install o-ring (19) into groove in bottom sub (4).
- I-1.11) Screw bottom sub (4) onto mandrel (1).
- I-1.12) Install shear pins (5) into shear sleeve (8) and bottom sub (4). Align plug hole in shear sleeve (8) with recessed hole in bottom sub (4) and install one shear pin (5) at a time.
- I-1.13) Once desired quantity of shear pins (5) are in installed, screw pipe plug (16) into shear sleeve (8).
- I-2) Unclamp top sub (6) from vise and remove assembled tool.
