A) DESCRIPTION

The DLT Retrievable Packer is a compression set packer with hydraulic hold down that is designed to provide an extra measure of dependability for rugged service. The hydraulic actuated upper hold-down provides more than the usual surface area to ensure that the packer will not move up the hole. It is ideally suited for high pressure, high temperature service work.

Some unique features of this packer include positive rotational locks on all internal connections, which allow for extreme values of torque (left-hand or right-hand) to be transmitted through the packer. Back-up rings on all the o-rings provide for more reliable sealing at high temperature and pressure.

This packer also comes with extra-long top and bottom subs which allow for hydraulic tong make-up and break out.

*Refer to Assembly instructions for specific torque recommendations as applicable.

Before first use, D&L recommends disassembly and inspection of the tool unless stated otherwise. Ensure parts have not been damaged during shipping. Replace damaged parts with D&L replacement parts. Contact D&L sales for replacement part information.

Re-assemble the tool after inspection. Install parts in the correct order and orientation. Properly tighten connections.

Before re-using the tool, D&L recommends disassembly and inspection of the tool. Clean parts and ensure parts are in good working condition. Replace worn or damaged parts with D&L replacement parts.

When redressing the tool, D&L recommends replacement of all seals, elements, o-rings, shear screws, etc. Contact D&L sales for redress kit and/or other replacement part information.

DRAG BLOCK SPRING (MIN HEIGHT)	HOLD DOWN BUTTON SPRING (MIN HEIGHT)
0.55 INCHES	0.55 INCHES

NOTE3: Before assembly, measure height of drag block springs and hold down button springs. Refer to spring height table – if height of an individual spring is less than the minimum height, replace spring(s).

E) SETTING PROCEDURES

CAUTION2: Do not run the tool without properly tightening connections. Running the tool with loose connections may damage the tool and cause malfunction.

NOTE4: Minimum force required to set 9-5/8" DLT Retrievable Packer is 25,000 lbs.

Run the DLT Packer to setting depth in conjunction with a D&L V-III Unloader. The unloader should remain open while running in. Pick up the work string and rotate it 1/4 turn to the right at the packer. Slack off weight on the packer to set the slips and compress the packing elements. Release the torque after slacking off 6 Ft to allow the unloader to close and lock. The set down weight must remain on the packer throughout well operation.

F) RELEASING PROCEDURES

Rotate the work string 1/4 turn to the right and pick up on the work string to open the D&L V-III Unloader. Allow time for the work string and casing pressures to equalize. Continued upward movement of the work string relaxes the packing elements, un-sets the slips, and automatically re-jays the packer. The tool may now be moved and re-set, or pulled from the well.

NOTES: Coordination of the unloader and the packer J-slots is imperative. The setting and releasing procedures above represent use of a right-hand open and right-hand close unloader J-slot with a right-hand set, automatic-release packer J-slot.

CAUTION: If the DLT Packer is run with a Retrievable Bridge Plug, make sure that the J-slots on the Retrievable Bridge Plug, Retrieving Tool, Unloader and Packer are compatible. Whichever direction the plug is set, the retrieving tool should release and the packer should set in the opposite direction.

Example: Right-hand set/right-hand releasing plug is used with a left-hand release retrieving tool, left-hand set packer and a left-hand close/right-hand open unloader.

G) STORAGE RECOMMENDATION

When preparing the tool for storage, follow the Pre-Installation Inspection Procedures. Re-assemble the tool with connections hand-tight only and in running position if applicable. Elements should be in a relaxed state—free from tension, compression, and other stresses that could cause deformation.

Store the tool, if possible, in an enclosed, temperature and humidity controlled environment. Avoid excessively high temperatures over long periods of time. Shield elastomeric parts from ultraviolet light sources. Keep tool dry and protected from condensation. Do not store in contact with or near volatile or corrosive chemicals. Do not store near ozone generating equipment or operations such as welding.
