A) DESCRIPTION

The DL-1B Tandem Tension Packer is an economical, compact, low-pressure, tension set, isolation packer used in casing or perforations and multi-zone injection installations. DL-1B Tandem Tension Packer runs with a tension set packer below. It can be run with the J-pins in the un-jayed position, or in the jayed position. In the un-jayed position, applying tension shears the shear pins and allows pack-off.

If run in the jayed position, the DL-1B Tandem Tension Packer must be used in conjunction with the ASI-X Packer. Set down weight shears the pins; left-hand rotation and applied tension will set the tool.

Before first use, D&L recommends disassembly and inspection of the tool unless stated otherwise. Ensure parts have not been damaged during shipping. Replace damaged parts with D&L replacement parts. Contact D&L sales for replacement part information.

Re-assemble the tool after inspection. Install parts in the correct order and orientation. Properly tighten connections.

Before re-using the tool, D&L recommends disassembly and inspection of the tool. Clean parts and ensure parts are in

When redressing the tool, D&L recommends replacement of all seals, elements, o-rings, shear screws, etc. Contact D&L sales for redress kit and/or other replacement part information.

D) SETTING PROCEDURES

CAUTION: Do not run the tool without properly tightening connections. Running the tool with loose connections may damage the tool and cause malfunction.

If run in the un-jayed position (straight pull), the DL-1B Tandem Tension Packer runs with a tension set packer below. Set the lower packer normally. Apply enough tension to shear the tandem tension packer pins. Continue applying tension (14,000 lbs) to pack off the packer elements.

If run in the jayed position, the DL-1B Tandem Tension Packer must be run with an ASI-X Packer below. Set the ASI-X Packer normally. Set down enough weight to shear the pins of the tandem tension packer. Apply left-hand rotation to move the J-pin out of the jayed position. Pick up on the work string with enough tension (14,000 lbs) to pack off the packer elements.

E) RELEASING PROCEDURES

Set down weight on the work string to release the tandem tension packer and initiate the releasing sequence of the tension packer below. Follow the tension packer releasing procedures to remove the work string from down hole.

F) STORAGE RECOMMENDATIONS

When preparing the tool for storage, follow the Pre-Installation Inspection Procedures. Re-assemble the tool with connections hand-tight only and in running position if applicable. Elements should be in a relaxed state—free from tension, compression, and other stresses that could cause deformation.

Store the tool, if possible, in an enclosed, temperature and humidity controlled environment. Avoid excessively high temperatures over long periods of time. Shield elastomeric parts from ultraviolet light sources. Keep tool dry and protected from condensation. Do not store in contact with or near volatile or corrosive chemicals. Do not store near ozone generating equipment or operations such as welding.
