A) DESCRIPTION

The Casing Packer is a large bore, single grip packer used to isolate damaged casing and for production or injection. This packer can run in tension or compression and can be used as a liner hanger when equipped with a right-hand release sub. Coarse, deep wickered slips allow this packer to set in open-hole or scaly casing. For open-hole set, this packer can be equipped with two elongated packing elements to assure a positive seal.

C) PRE-INSTALLATION INSPECTION PROCEDURES

CAUTION₁: D&L ships tool connections made-up **HAND TIGHT**—labeled with hand-tight tape on the tool (Fig. 1) — unless stated otherwise. Tighten/torque all connections properly before operating tool.

Before first use, D&L recommends disassembly and inspection of the tools unless stated otherwise. Ensure parts have not been damaged during shipping. Replace damaged parts with D&L replacement parts. Contact D&L sales for replacement part information.

Before re-using the tool, D&L recommends disassembly and inspection of the tool. Clean parts and ensure parts are in good working condition. Replace worn or damaged parts with D&L replacement parts.

When redressing the tool, D&L recommends replacement of all elements, cap screws, etc. Contact D&L sales for redress kit and/or other part information.

D) SETTING PROCEDURE

CAUTION₂: Do not run the tool without properly tightening connections. Running the tool with loose connections may damage the tool and cause malfunction.

D-1) TENSION SET

Run packer to setting depth. Slack off on the work string approximately (3"). Pick up on the work string and rotate 1/4 turn to the right at the packer. Pull tension to set slips and pack off elements (14,000 lbs). The work string must be left in tension or packer will become unset.

D-2) COMPRESSION SET

CAUTION₃: Casing Packer **MUST** be run upside down to set with compression.

Run packer upside down to setting depth while holding right-hand torque. Pick up the work string approximately (3"). Rotate the work string 1/4 turn to the left at the packer. Slack off on the work string sufficient weight to set the packer (14,000 lbs). The work string must be left in compression or packer will become unset.

E) RELEASING PROCEDURE

E-1) TENSION SET

Slack off on the work string and rotate 1/4 turn to the left at the packer to release the slips and relax the elements. Pick up on the work string while holding left-hand torque to return J-pin to the J-slot running position. The tool may now be retrieved or moved downhole and reset.

E-2) COMPRESSION SET

Pick up on the work string and rotate the work string 1/4 turn to the right at the packer to release the slips and relax the elements. The tool may now be retrieved or moved downhole and reset.

F) STORAGE RECOMMENDATIONS

When preparing the tool for storage, follow the Pre-Installation Inspection Procedures. Re-assemble the tool with connections hand-tight only and in running position if applicable. Elements should be in a relaxed state—free from tension, compression and other stresses that could cause deformation.

Store the tool, if possible, in an enclosed, temperature and humidity controlled environment. Avoid excessively high temperatures over long periods of time. Shield elastomeric parts from ultraviolet light sources. Keep tool dry and protected from condensation. Do not store in contact with or near volatile or corrosive chemicals. Do not store near ozone generating equipment or operations such as welding.

I) DISASSEMBLY

I-1) Clamp coupling (1) in vise.

I-1.1) Unscrew and remove bottom sub (9) from mandrel (2).

I-1.2) Remove elements (8), element spacer (7), and cone (6) from mandrel (2).

I-1.3) Unscrew and remove button head cap screws (10) securing drag springs (3) to mandrel (2).

I-1.4) Remove drag springs (3) from mandrel (2).

I-1.5) Unscrew and remove button head cap screws (10) securing slip arms (5) to mandrel (2).

I-1.6) Remove slip arm assemblies and disassemble:

I-1.6.1) Unscrew and remove button head cap screws (10) from slips (4).

I-1.6.2) Separate slips (4) from slip arms (5).

I-1.7) Unscrew and remove mandrel (2) from coupling (1).

CAUTION₄: Do NOT wrench or clamp on seal surface.

I-2) Unclamp and remove coupling (1) from vise.

J) ASSEMBLY

NOTE₂: Clean and inspect all parts. Replace all worn and damaged parts. Install parts in proper order, and orientation and tighten/torque all connections properly.

J-1) Clamp coupling (1) in vise.

J-1.1) Screw mandrel (2) into coupling (1).

CAUTION₄: Do NOT wrench or clamp on seal surface.

J-1.2) Set drag springs (3) in place on mandrel (2). Align holes in drag springs (3) with threaded holes in mandrel (2).

J-1.3) Screw button head cap screws (10) into mandrel (2) to secure drag springs (3).

J-1.4) Assemble slip arm assemblies and install:

J-1.4.1) Set slips (4) in place on slip arms (5). Align threaded holes in slips (4) with holes in slip arms (5).

J-1.4.2) Screw button head cap screws (10) into slips (5).

J-1.4.3) For each assembly, set in place on mandrel (2). Align holes in slip arms (5) with threaded holes in mandrel (2).

J-1.4.4) Screw button head cap screws (10) into mandrel (2).

J-1.5) Install cone (6), elements (8), and element spacer (7) onto mandrel (2).

J-1.6) Screw bottom sub (9) onto mandrel (2).

J-2) Unclamp coupling (1) from vise and remove assembled tool.
